### **TYCO FIRE AND SECURITY ANNOUNCES PARTNERSHIP WITH MTG ENGINEERING**

*Exclusive Global Distribution of MILS® Emergency Evacuation Assistance Systems*

**Boca Raton, Florida USA** (March 2, 2007) – Tyco Fire and Security and MTG Engineering are pleased to announce the signing of a strategic partnership and exclusive distribution agreement for MILS emergency evacuation assistance systems. Under the terms of this agreement, Tyco companies around the world will sell, service, and install MILS solutions.

The MILS system is uniquely designed to help save lives by guiding people to safety during emergencies. MILS systems integrate with fire detection, building automation, and other systems inside the facility and receive information about the location and nature of emergencies. Using sophisticated control logic, the MILS solution identifies the safest routes of egress and activates a combination of floor and wall mounted lighting designed to be highly visible even in smoke-filled areas. The MILS system leads building occupants away from dangerous areas and towards the nearest safe exit. Applications for the MILS solution include commercial buildings, seagoing vessels, offshore installations, aircraft, sporting venues and transportation complexes.

Clive Weston, Vice President and General Manager of Tyco's Fire Detection Business Unit says, "The MILS system is an excellent addition to Tyco's family of industry leading life-safety solutions. With MILS products integrated with our fire detection systems, we can now provide customers with the earliest possible emergency warning and help lead them away from danger." Weston goes on to add, "During a fire it's very easy to become disoriented. Thickening smoke can obscure standard emergency lighting. The MILS system is designed to be visible even in heavily smoke filled areas and can help save lives."

"The MILS system is the most reliable, fastest and safest way to guide people in extreme conditions and in daily human processes." says Leo Hatjasalo, CEO of MTG. Mr. Hatjasalo continues: "We are delighted to be working closely with such a world-class company as Tyco. Through this partnership, MTG will now have access to Tyco's high quality marketing, sales, distribution, and installation networks around the world."

### **About MTG-Engineering**

Oy MTG-Engineering Ltd. (MTG) is a privately owned company, and was founded 1991 in Helsinki, Finland. MTG's focus is on intelligent guidance and information systems, combined with material technologies and techniques.

MTG's expertise in the field of information technology, electrical and optic engineering, along with its ability to utilise the latest in material technology, resulted in the successful development and industrialisation of the unique MILS system, and its components.
